

General prompt: I asked to generate a comic strip by following comics narrative arc and conventions, language included

Storyboard 1

Panel 1: The Chinese Bet

- **Visual:** A Chinese diplomat sits at a grand table. He holds a giant, glowing microchip labeled *AI+ Framework*. In the background, engineers build a massive data center in the desert.
- **Caption Box:** China exports an entire tech system. They bypass U.S. sanctions by trading efficiency.
- **China (Speech Bubble):** "We offer real hardware and training. Our 40 billion partners hedge against your puppet strings!"

Panel 2: The American Gatekeeper

- **Visual:** An American official points a stern finger. She holds a master key labeled *Cloud Ecosystem* unlocking a treasure chest of server access.
- **Caption Box:** The U.S. uses cloud access as a choke point to force nations to play by its own rules.
- **United States (Speech Bubble):** "Buy chips from anywhere? No, play on our terms—openness and safety—or get locked out."

Panel 3: The European Standoff

- **Visual:** A European regulator sits with a scale, weighing legal documents. She looks unimpressed at both the U.S. and China.
- **Caption Box:** The EU views this as an opportunity to set global safety rules without relying on either superpower.
- **European Union (Speech Bubble):** "While you play great power games, I am making the rules. Comply with my standards first."

Panel 4: The Shared Reality

- **Visual:** All three leaders stare at a massive, floating globe. A tangled mess of power lines connects them all, showing they need each other.
- **Caption Box:** The powers disagree on the rules but know that controlling data and AI sets the balance of power.
- **Narrator:** "The race for the new global brain begins."

Second prompt: "Now create a comic where the reader cannot immediately identify which actor is speaking. Reveal the actors only through their assumptions about power."

Storyboard 1

Panel 1: The Logistics Architect

- **Visual:** A close-up on a pair of hands steadily assembling a highly complex grid of miniature server racks on a table. The background is a stark, clean room filled with blueprint schematics. The speaker's face is cut off by the top of the frame.
- **Dialogue:** *"Power is not a philosophy. It is an industrial system. When you lay physical infrastructure and train the local workforce on your platform, you create a dependency that operates completely outside the reach of anyone's sanctions theology."*

Panel 2: The Network Sovereign

- **Visual:** A silhouette of a figure standing before a massive wall of glowing blue monitor screens tracking global cloud traffic and data bottlenecks. The view is from behind, hiding all identifying features.
- **Dialogue:** *"You misunderstand the choke points. Physical boxes do not matter if you do not control the gatekeepers. Real leverage means owning the global ecosystem and the regulatory intermediaries. If they want to play in the big leagues, they play on our terms—or we cut the access."*

Panel 3: The Standard Bearer

- **Visual:** A shadow cast against a marble wall. The silhouette shows a figure holding an open leather-bound legal document, turning a page. The environment feels heavy, institutional, and ancient compared to the tech in the previous panels.
- **Dialogue:** *"Both of you are trapped in a zero-sum game. Capital doesn't flow through puppet strings; it seeks legal certainty and stability. True dominance belongs to the one who writes the compliance frameworks and turns standards into industrial leverage while you fight in the dirt."*

Panel 4: The Unmasking

- **Visual:** The camera pulls back to a wide shot, finally revealing the three speakers sitting around a grand triangular table. In the center floats a glowing holographic globe woven with pipelines.
- On the **left**, the first speaker wears a pin of the **Chinese State Council's AI+ framework**.
- On the **right**, the second speaker wears a **U.S. Department of State** badge.
- In the **center**, the third speaker closes an **EU Digital Sovereignty Act** portfolio.
- **Narrator Box:** *They speak different languages of power—Infrastructure, Gatekeeping, and Regulation—yet they all scramble to claim the same new currency: the compute dollar.*
